

Nous avons tous un jour ou l'autre ressenti le besoin de retrouver telle ou telle ancienne citation de plante ou de champignon pour le département des Pyrénées-Orientales. Alors, dans la mesure de la courte existence de notre revue, nous avons décidé de créer un index de tous les noms cités dans ses numéros, sans parti pris sur la richesse des informations qui s'y rapportent.

Cet index contient donc tous les noms scientifiques cités, sans aucune considération de leur valeur taxonomique, de leurs statuts ou du degré d'information contenu dans l'article référencé. Les taxons sont présentés dans la liste sous les différents noms publiés tels quels dans la revue et qui apparaissent par ordre alphabétique, sans que soient indiquées leurs relations synonymiques ou leur validité par rapport au(x) référentiel(s) actuel(s). Il s'agit essentiellement de noms d'espèces ou de rangs inférieurs, rarement de noms

de genres. La liste inclut aussi quelques noms pré-linnéens. Ces noms peuvent être simplement cités, qu'ils soient ou non présents dans le département, ou faire l'objet de descriptions détaillées, avec ou sans références à leur localisation et leur écologie.

Ils sont présentés en plusieurs tables : phanérogames, ptéridophytes, bryophytes, champignons, algues et lichens, complétées par une table spéciale qui rassemble les références à des tableaux contenant des listes importantes de plantes qui n'ont pas été reprises séparément dans l'index. Enfin, une liste des auteurs donne la référence à la première page de leur article.

Le format des références est le suivant : numéro de volume, “:”, numéros de pages (séparés par une virgule), éventuellement disposés sur des lignes différentes pour chaque volume où l'espèce est citée.

Botrychium simplex E. Hitchc.

Russula nana Killerm.

Scapellophila cataractae (Mitt) Broth.

Lobaria pulmonaria (L.) Hoffm.

Genista lobelii DC.
